2:Lowie E-4 (no date) 1946 SP8 Bororo SP8

or a black equivalent during menstruation; it is attached either to a girdle or to a tight-fitting bark corset. Women wear a gray perineal band.

Except for the exclusively masculine feather head ornaments, labrets, and nose ornaments (pls. 90, *top;* 94), the sexes use the same type of decoration. It is customary for men to manufacture necklaces and ear ornaments as a wedding gift for their brides.

Urucú provides red body paint and wards off insects, but on the São Lourenço River, it is used in moderation. The *Bororo* spread viscous rosin over their bodies, to which they then stick bird feathers, thus sometimes covering all of their arms. This is largely a curative measure against sores rather than a purely decorative device.

The men employ head ornaments to a considerable extent (pls. 92, *left;* 93). There are semicircular fans of arara feathers worn above the forehead; small fans of flexible feathers tied to the forehead so as partly to obscure the vision; and still other arrangements.

Koslowsky (1895 b) ascribes to all his *Western Bororo* the practice of wearing amulets composed of the tooth of a wild canid or a feline species.

TRANSPORTATION

Canoes were quite unknown in the west and in the São Lourenço River region, though on the Vermelho River they occur in recent times. Both sexes are adept at swimming. Men swam across rivers, holding aloft their bows, to which the arrows were tied horizontally, and simultaneously carried their game on their chests, fastened below their arms. Women swam with their burden-baskets full of nuts and roots, tying these receptacles in fours to wooden sticks and guiding them by ropes. On land they carried the baskets on their backs by a bast sling that merged into a tumpline in front.

MANUFACTURES

The men work mainly in their club house.

Spinning and plaiting.—In the family home, men merely pluck from the women's heads the hair subsequently to be made into cordage, and plait cotton bands for feminine arm, wrist, and ankle decorations. They spin both cotton and human hair on a shaft with a shell or clay disk 1½ to 2 inches (3.8 to 5 cm.) in diameter for a whorl. Holding the flock of cotton or several hairs with the left hand attached to the uppermost quarter of the spindle, i. e., the part above the whorl, they roll the longer section of the shaft on the right thigh. The thread thus formed above the whorl is ultimately wrapped around the long section of the shaft. Palm fiber is twisted on the thigh by hand. Often the big toe helps in making thread. Hair threads are plaited into cords worn round the hair of the head or body, but also into wrist-guards. True weaving does not occur (fig. 51, *a*, *b*).
